SKILLS

- **Languages:** C++, JavaScript, C, PHP, Python
- **Frameworks:** HTML and CSS, Bootstrap, Express JS, React
- **Tools/Platforms:** MySQL, MongoDB, PostgreSQL
- **Soft Skills:** Problem-Solving, Team Player, Project Management, Adaptability

PROJECTS

Quiz Master – Quiz Application | [GitHub](#)

November 2025

- **Project Scope:** A comprehensive, production-ready application designed to replicate the engaging, interactive experience of platforms like Kahoot and Quizizz.
- **Backend Architecture:** Utilizes Django REST Framework to provide a robust, scalable API foundation for managing data and logic.
- **Frontend Interface:** Built with React to deliver a responsive and dynamic user interface for administrators and participants.
- **Versatile Gameplay:** Uniquely supports two distinct modes: traditional self-paced quiz-taking and high-engagement, real-time live sessions.

Meal Cart – Ai Recipe and Grocery List Generating Platform | [GitHub](#)

November 2025

- **Project Overview:** A production-ready MERN stack application designed as a comprehensive system for AI-driven recipe generation and holistic meal management.
- **AI Integration:** Leverages Google Gemini AI to generate personalised custom recipes and provide interactive cooking assistance within the app.
- **Management Tools:** Features a cohesive suite of utilities including a weekly meal planner, live pantry inventory tracking, and an automated smart grocery list generator.
- **Technical Implementation:** Built with a modern tech stack utilizing HTML, CSS, JavaScript, MongoDB, Express, and React Router, secured with bcrypt.

Hemova-Blood Donation Management System | [GitHub](#)

April 2025

- **System Identity:** A dedicated Blood Donation Management System designed to bridge the gap between donors, hospitals, and administrators.
- **Operational Management:** Streamlines the donation lifecycle by providing tools to effectively organise and manage blood donation camps.
- **Inventory Tracking:** Includes critical functionality for monitoring real-time blood availability and stock levels to ensure efficient distribution.
- **Technology Stack:** Built using a reliable backend of PHP and MySQL, complemented by HTML, CSS, and JavaScript for the user interface.

CERTIFICATES

- **Frontend Developer** | [Hacker Rank](#)
- **Software Engineer Intern** | [Hacker Rank](#)
- **Full-Stack Development** | [CipherSchool](#)
